c============================================================
c     newtsqrt:  Uses Newton's method to find (positive)
c     square root of number supplied on command line, i.e.
c     solves
c
c     f(x) = x^2 - a = 0
c
c     for given 'a'.  Optional second argument specifies
c     convergence criteria (relative dx).
c
c     Tracing output (written to standard error)
c     includes iteration number, estimated root (xn),
c     change in estimate (dxn), log10(dxn), residual and
c     log10(residual).
c============================================================
      program         newtsqrt

      implicit        none
